Your input:

Current expression:

$$(2 + 1 + x)^9 + 2$$

Simplify something:

$$4.58485e + 007$$

Current expression:

$$x^5 + \frac{78^2}{12^2} + x^{(2*7)}$$

Simplify something:

$$3.79293e + 008$$

Current expression:

$$\cos 32 + 5$$

Simplify something:

$$5.83422$$

Current expression:

$$10 + 32.2$$

Simplify something:

42.2

Current expression:

$\frac{3232.11}{56}$

Simplify something:

57.7163

Current expression:

$\frac{(22.45+78*x)}{(44*x)}$

Simplify something:

1.89717

Current expression:

$45 + x$

Simplify something:

49.1

Current expression:

$2121 * 99$

Simplify something:

209979

Current expression:

$45665.3 - x + 12.32$

Simplify something:

45673.6

Current expression:

$$8 * (x + y)$$

Simplify something:

65.6

Current expression:

$$777 + \sin(x * (67 + 66)) - 12$$

Simplify something:

764.027

Current expression:

$$\cos(x + 12)$$

Simplify something:

-0.924133

Current expression:

$$777 + \cos(x * (67 + 66.1)) - 12 + \sin(x + 78.43) + x$$

Simplify something:

770.45
